

Rasib Nadeem

BACKEND/FULLSTACK SOFTWARE ENGINEER

[\(+92\) 304-2353678](tel:+923042353678) rasibnadeem101@gmail.com <https://rasibx.com> [rasibn](#) [Rasib Nadeem](#) [@rasibx](#)

Professional Experience

Software Engineer II

Remote, Pakistan

CAREEM

June 2024 - Present

Bikes & Tenants team (Golang, Springboot, NextJS, MySQL, Kafka)

- Migrated trip payment flow from synchronous to asynchronous, fixing silent charge and refund drops in the Kafka consumer by statefully tracking pending capture/refund states on invoices and settling them via payment provider callbacks.
- Built Pay-As-You-Go billing with MIT pre-authorization for group rides, reusing payment consent for returning users with CIT fallback.
- Migrated bike passes from third-party vendor to in-house system, enabling full ownership of subscription lifecycle and pricing; rolled out via feature flags with zero downtime.
- Diagnosed and resolved a series of production database performance issues including N+1 queries and a timing-out query choking on 7.5M rows; replacing a LATERAL join with a MAX subquery alone yielded up to 42x speedup, cutting P95 latency by 2x and restoring database stability.
- Consolidated multiple home services categories into a unified vertical, migrating terabytes of user data with zero downtime.
- Led backend engineering for the tenants vertical, delivering 5 new services (Lab Test, Pest Control, IV Therapy, Packers & Movers, Flu Vaccine) in under 6 months.
- Built a full-stack operator dashboard in React with interactive map interfaces for drawing and managing geospatial coverage zones and real-time vehicle positions.

Localization team (Python, FastAPI)

- Built infrastructure for LLM-assisted app-wide localization, enabling scalable translation workflows across multiple languages.

Teaching Assistant

Karachi, Pakistan

INSTITUTE OF BUSINESS ADMINISTRATION

Spring 2023 - 16 months

- Held tutorials and office hours to clarify difficult topics in Theory of Computation and Algorithm Design courses.
- Provided tailored feedback on assignments for 160+ students, improving their grasp of key concepts.

Projects

Quark Programming Language

[rasibn/quark](#)

RUST, RECURSIVE DESCENT PARSING

- Created an ergonomic DSL for quantum computing by building a complete programming language that transpiles to Python NumPy for efficient computation.
- Achieved full language functionality by implementing lexer, parser, and semantic analyzer supporting functions, variables, scoping, types, arrays, and matrix operations.

Skills

Programming Languages Golang, Python, JavaScript/TypeScript, Rust, Java

Technologies React, Vue.js, Svelte, Spring Boot, Kafka, Linux, Nix, Docker

Education

Institute of Business Administration

Karachi

BSCS

2020 - 2024

- CGPA: 3.67
